

2024

# Sustainability Report

# CEO Letter

I am proud to present Atkore’s annual Sustainability Report, which showcases our Environment, Social, and Governance (ESG) accomplishments and progress towards our goals in fiscal year 2024. As the ESG landscape continues to evolve, Atkore is actively driving sustainability efforts across our operations, products, and communities.

A key achievement in the past year has been the development of [Environmental Product Declarations \(EPDs\)](#) for a substantial portion of our core product offerings. These EPDs represent approximately half of our global sales and provide our customers with greater transparency regarding the environmental impacts of the products they use. As we continue to expand our portfolio of EPDs across additional product lines and international markets, we further solidify Atkore’s dedication to helping our customers achieve their sustainability goals.

Our commitment to sustainability within our products and beyond has not gone unnoticed. In fiscal year 2024, Atkore was recognized in Newsweek’s ranking of America’s Greenest Companies and was honored with the ENERGY STAR® Partner of the Year Award for a second time, a distinction awarded by the U.S. Environmental Protection Agency’s voluntary program that certifies buildings meeting strict energy efficiency criteria and promotes energy savings, cost reductions, and environmental protection. Additionally, we achieved an EcoVadis Bronze rating for the third year, reflecting our ongoing efforts to embed sustainability across our operations and value chain. We are especially proud to announce that we have achieved our 2025 Climate, Carbon, and GHG Emissions goal a full year ahead of schedule. This milestone builds on Atkore’s 2023 successes, where we reached our Health and Safety goal and our Employee Attraction, Development, and Retention goal two years ahead of the 2025 target.

Central to our success is the culture we foster within Atkore. I am proud to share Atkore was recertified as a Great Place to Work® for a fourth consecutive year and received a third Top Workplaces USA Award, along with five Culture Excellence Awards. Our efforts to promote an inclusive workplace were further acknowledged by the Human Rights Campaign’s (HRC) “Equality 100 Award” for LGBTQIA+ inclusion. These accolades showcase our enduring efforts to create and maintain a supportive workplace where our employees can thrive, feel valued, and are empowered to contribute to our collective business and sustainability achievements.

Outside of the workplace, Atkore continues to make a positive impact through community engagement initiatives. Across our organization, we encourage and support employees in giving back to their local communities through causes that matter most to them. From our Hobart, IN facility’s month-long food drive to annual, multi-site back-to-school drives, Atkore employees continue to embody our values through their meaningful contributions to the places where we live and work.

As we look ahead, I am excited about the contributions Atkore will make toward building a more sustainable future across our business and in the communities where we operate.

Sincerely,

Bill Waltz  
President and CEO

## HIGHLIGHTS

### Atkore Achieves Climate, Carbon, and GHG Emissions Goal Ahead of Schedule

Atkore has reached its Climate, Carbon, and GHG Emissions goal for 2025 ahead of schedule in fiscal year 2024, reducing its GHG emissions intensity to 49.8 metric tons of CO<sub>2</sub>e per million USD—a significant improvement from our 2020 baseline of 58.2 metric tons of CO<sub>2</sub>e per million USD.

This reduction is the result of Atkore's ongoing participation in Energy Star's Challenge for Industry. Over the years, Atkore has made Energy Star's 10% energy intensity reduction goal within five years

a key internal focus, incorporating it as part of our broader sustainability strategy. Furthermore, Atkore is actively participating in strategic energy management programs with local utilities. From these initiatives, we continuously identify opportunities for energy savings and ensure progress toward emissions reduction goals. Through ongoing equipment upgrades and continuous tracking of energy performance, Atkore is making sustained improvements to reduce GHG intensity.

# Environment

## Accomplishments

- Recognized in the ranking of America's Greenest Companies 2024 by Newsweek.
- Awarded with the 2024 ENERGY STAR® Partner of the Year Award.
- Installed electric charging stations at our Phoenix, AZ facility that leverage the approximate 85,000 kWh generated per month from previously-installed solar canopies.
- Updated steel strip cleaning technology at our Harvey, IL facility for improved quality and energy-efficiency, resulting in energy savings of approximately 1.13 million kWh annually.<sup>[1]</sup>
- Announced a fully electric vehicle fleet that is powered by solar energy at our Oudenaarde, Belgium facility and installed on-site charging stations for the West Bromwich, UK facility's electric vehicles.

[1] Calculations conducted by independent third-party provider.

## Climate, Carbon, and GHG Emissions Goal

Reduce Scope 1 and Scope 2 GHG emissions intensity by 10% by 2025, compared to 2020 baseline values<sup>[2]</sup>

2020 BASELINE	2024 PROGRESS	2025 TARGET
58.2	49.8	52.4
METRIC TONS CO <sub>2</sub> e/MILLION USD	METRIC TONS CO <sub>2</sub> e/MILLION USD <sup>[3]</sup>	METRIC TONS CO <sub>2</sub> e/MILLION USD

[2] Revenue used to calculate intensity related metrics has been adjusted to remove the impact of changes in average selling prices.

[3] GHG intensities adjusted to base year sites. Emissions and revenue metrics have been normalized to reflect consistent operational boundaries and thus exclude new acquisitions and material organic operational expansions that occurred after base year. For 2022 and 2023 we previously reported unadjusted GHG intensity of 54.1 metric tons CO<sub>2</sub>e/million USD and 55.8 metric tons CO<sub>2</sub>e/million USD, respectively.

# Social

## Accomplishments

- Recertified as a Great Place to Work® for the fourth consecutive year, certified as a Top Workplace for the third consecutive year, and awarded five Culture Excellence Awards in the categories of Leadership, Work-Life Flexibility, Compensation & Benefits, Innovation, and Purpose & Values.
- Recognized with “Equality 100 Award: Leaders in LGBTQ+ Inclusion” from the HRC Foundation.
- Awarded “Subcontractor Safety” by HIIT Contracting to Atkore Unistrut Construction for its safety program and safe work ethic.
- Launched 4-pillared employee development program that empowers frontline workers through immersive cultural onboarding, skill-focused training modules, structured job qualification programs, and supervisor development leadership training.
- Provided more than \$133,000 in grants through The Atkore Family Foundation to assist employees as well as employees of customers and suppliers who experienced unexpected hardships, such as fires, floods, hurricanes, and other family emergencies.
- Increased global workforce diversity from 48% in fiscal year 2023 to 55% in fiscal year 2024.

### HIGHLIGHT

#### Employee-Driven Community Initiatives Across Atkore Sites

Atkore employees across our locations are empowered to lead community initiatives tailored to local needs, an approach that ensures our impact is meaningful and relevant. Over the past year, notable activities have included one facility’s “Socktober” fundraiser, which collected and donated over 1,000 pairs of socks to the unhoused community; another facility’s month-long food drive, which donated 2,000 pounds of food to a nearby food pantry; and holiday drives at several sites to provide toys and gifts to families in need.

Another key initiative that started four years ago at Atkore’s headquarters in Harvey, IL, and has since been adopted by several other locations globally, is an annual back-to-school drive. In partnership with local organizations, participants assemble bookbags filled with school supplies and distribute them to students in nearby areas. In 2024, the Harvey drive distributed 1,500 backpacks and the Hobart, IN, drive provided over 400 backpacks to their communities.

# Governance and Product

## Governance Accomplishments

- Conducted a double materiality assessment in preparation for compliance with the Corporate Sustainability Reporting Directive (CSRD).
- Implemented a Supplier ESG Assessment program to proactively identify and mitigate risks within the supply chain through targeted corrective measures.
- Achieved a 100% supplier response rate for our global conflict minerals campaign, which includes our domestic and international suppliers.
- Continued to be guided by our Code of Business Conduct and Ethics and our Guide to Ethical Conduct. We also maintain Anti-Bribery & Anti-Corruption and Whistleblower policies which apply to employees, contractors, executives, and members of our Board of Directors.

## Product Accomplishments

- Published Environmental Product Declarations (EPDs) for products representing approximately half of our global sales.
- Awarded Rexel's Contractor & Installer Supplier of the Year Award in the UK.
- Received the Most Complete European Technical Information Model Data Award from the Electrical Distributors' Association for Atkore Unistrut and Atkore Marco product data.
- Achieved more than \$200 million in direct sales attributed to products that support the global transition to a decarbonized economy.

## HIGHLIGHT

### Atkore's Environmental Product Declarations

Atkore has developed Environmental Product Declarations (EPDs) for a variety of our core product offerings, including Galvanized Steel Conduit, Stainless Steel Conduit, PVC Conduit & Fittings, Metal Framing, and Cable Management portfolios. The EPDs represent approximately half of our global sales, demonstrating our commitment to both sustainability and transparency.

An EPD is a third-party independently verified report that provides information on a product's environmental impact throughout its life cycle. Based on data from a life cycle assessment, EPDs communicate the environmental effects associated with a product or system's raw material extraction, energy use, chemical makeup, waste generation, and emissions to air, soil, and water.

EPDs help our customers reduce the environmental impact of their projects by allowing them to make informed, data-driven choices about the products they use. EPDs also contribute points towards sustainable building accreditations such as LEED and BREEAM. In UK and EU markets, EPDs are becoming standard, and their popularity is increasing across the US, with continued growth expected in the coming years. They also are essential for businesses to measure and benchmark Scope 3 emissions, thus allowing for compliance with the GHG Protocol standards. By offering transparency into product environmental impact, EPDs give customers a strategic edge by enabling informed purchasing decisions that align with their sustainability goals.

# Data and Approach

## Reporting Frameworks

Atkore has reported the information provided in the following data tables for the period October 1, 2023 through September 30, 2024, with reference to the Global Reporting Initiative (GRI) Standards. Additionally, Atkore reports in line, but not fully in accordance, with the Sustainability Accounting Standards Board (SASB) Standard for Electrical & Electronic Equipment (RT-EE version 2023-12). Atkore discloses climate-related risks and opportunities in the Task Force on Climate-related Financial Disclosures (TCFD) Index.

## Report Scope

The 2024 Sustainability Report describes key accomplishments and updates from our sustainability programs and initiatives. Strategy, governance, policies, and management approaches for our material topics can be found in the ESG section of our [website](#). Atkore reports on all material topics identified in the SASB standard for our industry, as well as on other topics identified in our 2020 materiality assessment. We consider the impact of our direct operations in the scope of this report. All employees are included in the health and safety statistics, all material manufacturing and distribution facilities are included in environmental statistics, and full-time and part-time employees and contractors are included in demographic statistics. Material manufacturing and distribution facilities include sites with 10 or more full-time employees; however, there are smaller locations meeting this definition where water use is non-material and usage data is not available. The information presented in the body of this report is based on activities carried out

during fiscal year 2024 (October 2023–September 2024). The data in this report is based on activities carried out during fiscal years 2022 (October 2021–September 2022), 2023 (October 2022–September 2023), and 2024 (October 2023–September 2024).

For questions regarding the report or its contents, contact [Investors@Atkore.com](mailto:Investors@Atkore.com).

## Cautionary & Forward-Looking Statements

This report contains forward-looking statements that are subject to known and unknown risks and uncertainties, many of which are beyond our control. All statements other than statements of historical fact included in this report are forward-looking statements. Forward-looking statements appearing throughout this report include, without limitation, statements regarding our intentions, beliefs, assumptions, or current expectations. You can identify forward-looking statements by the fact that they do not relate strictly to historical or current facts. These statements may include words such as “believes,” “expects,” “may,” “will,” “shall,” “should,” “would,” “could,” “seeks,” “aims,” “projects,” “is optimistic,” “intends,” “plans,” “estimates,” “anticipates,” and other comparable terms. We caution you that forward-looking statements are not guarantees of future performance or outcomes and that actual performance and outcomes may differ materially from those made in or suggested by the forward-looking statements contained in this report. Further, any forward-looking statement speaks only as of the date on which it is made.

PILLAR	RECOMMENDATION	RESPONSE
<p><b>GOVERNANCE</b></p>	<p>a) Describe the board’s oversight of climate related risks and opportunities.</p> <p>b) Describe management’s role in assessing and managing climate related risks and opportunities.</p>	<p>The Nominating &amp; Governance Committee of Atkore’s Board of Directors has oversight of ESG issues, including climate-related risks and opportunities. The Committee receives a quarterly update on Atkore’s ESG activities, including progress against our GHG emissions intensity goal and supporting key performance indicators. The full Board of Directors is updated on Atkore’s long-term ESG strategy annually.</p> <p>Atkore’s EHS team oversees the company’s key environmental programs and associated metrics, including GHG emissions, energy use, and water use. Quarterly, Atkore’s Executive Steering Committee reviews environmental metrics and progress against internal key performance indicators. This information is further relayed to the Nominating &amp; Governance Committee of the Board.</p>
<p><b>STRATEGY</b></p>	<p>a) Describe the climate-related risks and opportunities the organization has identified over the short, medium, and long term.</p> <p>b) Describe the impact of climate-related risks and opportunities on the organization’s businesses, strategy, and financial planning.</p> <p>c) Describe the resilience of the organization’s strategy, taking into consideration different climate related scenarios, including a 2°C or lower scenario.</p>	<p>Atkore has analyzed transition and physical climate risks and opportunities through 2050 under business-as-usual and low emission scenarios.</p> <p>The physical risk analysis conducted in 2022 included an assessment of site-specific climate hazards to Atkore’s key manufacturing and distribution locations. Fifty-one site locations were assessed for nine different climate hazards, including flooding, water stress, extreme temperatures, hurricanes, and wildfires, based on present, 2030, and 2050 timeframes. The climate scenarios used for future projections included lower and higher emission scenarios based on Shared Socioeconomic Pathways (SSPs) developed by the Intergovernmental Panel on Climate Change. SSP1-2.6 is a low GHG emissions scenario where global warming stays below 2°C warming by 2100, aligned to current commitments under the Paris Agreement; SSP3-7.0 represents a high GHG emissions scenario that reflects an average warming greater than 3°C by 2100.</p> <p>In the short-term present timeframe, two manufacturing sites were identified as having high risk—largely due to river flooding. The site identified as the highest risk is one of Atkore’s smallest manufacturing sites, and both high risk sites have integrated strong flood prevention and mitigation measures to manage risks. In medium and longer-term timeframes, the number of sites with high risks are projected to increase to four locations (2030) and 10 locations (2050) under the higher emission climate scenario. Across all locations, the top hazard in the present timeframe is river flooding, while the main emerging climate hazard is projected to be water stress.</p> <p>The physical risk analysis demonstrated how climate change may affect Atkore’s physical assets, present a potential health and safety risk to employees, impact suppliers, and impact transportation and distribution networks. Climate events may also impact the construction sector, thereby not only increasing the risk of possible construction delays, but also increasing demand for more resilient infrastructure. However, by identifying these climate risks, Atkore has the opportunity to enhance its risk management measures and incorporate them into its business strategy.</p> <p>The transition risk analysis applied sector-specific indicators representing changes across the economy to analyze various climate scenarios (from business as usual to Net Zero by 2050) to assess how changes in policies that incentivize a low carbon future could present risks and opportunities that may have a commercial impact on the company. Emerging energy transition risks may be lower in the near-term but could increase over time through 2050 in a lower carbon future with greater pressures to reduce manufacturing emissions and energy consumption. However, there are also market expansion opportunities for Atkore’s electrical business in a low carbon future that are available beginning in the near-term and could further expand over time.</p> <p>Pressures to decarbonize manufacturing could increase Atkore’s operational costs. For example, carbon pricing policies targeting industrial manufacturing, power use, or energy use, may result in pass-through costs. Costs for key input materials, such as steel, could also increase due to potential policies aimed at decarbonizing input material production, and Atkore may see competing demand for the same materials also needed in other expanding green sectors in a low carbon future. Concurrently, there are climate-related opportunities for Atkore across product lines. Atkore’s electrical products can support the low carbon transition as electrification increases, more renewable generation infrastructure is built, and electric vehicle charging infrastructure is deployed at a larger scale. Climate policies that encourage and incentivize climate-resilient infrastructure may also increase demand for electrical products.</p>

PILLAR	RECOMMENDATION	RESPONSE
<b>RISK MANAGEMENT</b>	<p>a) Describe the organization’s processes for identifying and assessing climate related risks.</p> <p>b) Describe the organization’s processes for managing climate related risks.</p> <p>c) Describe how processes for identifying, assessing, and managing climate-related risks are integrated into the organization’s overall risk management.</p>	<p>Atkore aligned with industry-leading approaches to assess climate risks and opportunities.</p> <p>The climate physical risk analysis assessed risk to climate hazards at 51 of Atkore’s locations. Nine different climate hazards were assessed across lower- and higher-emission climate scenarios (SSP1-2.6 and SSP3-7.0) in current, medium-term (2030), and longer-term (2050) time horizons. For select assets identified as critical to business operations, a deep dive analysis was conducted to assess Atkore’s insurance coverage against flooding and hurricane hazards.</p> <p>The transition risk analysis applied sector-specific indicators representing changes to energy and emissions across the economy under various climate scenarios (from business as usual to Net Zero by 2050). The evaluation relied on geography-specific scenario data from several organizations, such as the International Energy Agency and the Network for Greening of the Financial System, to highlight the landscape of financial risks and opportunities that Atkore may be expected to operate in over the coming decades to inform how to position itself. The analysis focused on Atkore’s sensitivity to policy and legal risk (e.g., from carbon pricing and regulatory obligations), technology and resource efficiency changes (e.g., from renewable energy and advances in energy efficient technology), market risks and expansion opportunities for various product lines (e.g., due to changing policies, customer behavior, and cost of raw materials or energy), and reputation (e.g., from changing customer preferences and stakeholder concerns).</p> <p>Atkore strives to manage transition risks associated with a lower carbon future by reducing our operational GHG emissions. Our greatest source of Scope 1 and Scope 2 emissions is generated from our industrial plants using grid electricity, which we aim to reduce through our partnership with ENERGY STAR® and other initiatives across our sites. Company efforts to reuse and recycle raw materials in operations may also help to further support lower environmental, energy, and emissions impacts.</p>
<b>METRICS AND TARGETS</b>	<p>a) Disclose the metrics used by the organization to assess climate related risks and opportunities in line with its strategy and risk management process.</p> <p>b) Disclose Scope 1, Scope 2, and, if appropriate, Scope 3 greenhouse gas (GHG) emissions, and the related risks.</p> <p>c) Describe the targets used by the organization to manage climate related risks and opportunities and performance against targets.</p>	<p>Atkore met its Climate, Carbon, and Emissions goal to reduce Scope 1 and Scope 2 GHG emissions intensity by 10% by 2025, compared to 2020 baseline values in fiscal year 2024—one year ahead of our 2025 target. Atkore’s Scope 1 and Scope 2 GHG emissions and other relevant environmental metrics related to water, energy, and air emissions are included in the Data Tables in this report.</p>
