Comprehensive
System Solution

Atkore
Defender™

| A product as good as your design.

Atkore Defender™, the complete system solution

When designing for harsh environments where increased protection against corrosion is required, reach for the premium finish coating of Atkore Defender™.

Designed to streamline your installation process, Atkore Defender™ offers a product that contains self-healing properties which can eliminate the necessity to paint cut ends at the job site.

Encompassing metal framing and cable management, straight lengths and accompanying accessories are available in the Atkore Defender™ premium finish for a comprehensive system solution.

As the authentic Unistrut, we celebrate a century of innovation and continue to advance.

**Atkore
Defender™**

A cost-effective solution

Outperforming Hot-Dip-Galvanising by lasting up to 3 times as long before reaching the 5% red rust failure criteria*, the premium finish of Atkore Defender™ aids in extending the service life of your building, while reducing maintenance and labour costs in the long run.

**Atkore Defender™
heals over time**

Healing duration can vary depending on weather, location, type and size of application.

**Hot-Dip Galvanised
rust may form
on the cut end**

Atkore Defender™ Advantages

**Self-healing
properties**

**Ideal in
corrosive
environments**

**Streamlines
installation**

Proven to perform

Formulated to withstand salt spray, high humidity, and other environmental extremes seen in demanding and mission-critical applications, Atkore Defender™ coated product is ideal to specify on projects such as mobile phone towers, electrical substations, solar panel framing, rooftop supports, highways, and other installations where Hot-Dipped Galvanised products might not be up to the task.

Did you know?

1,000 hours of continuous salt spray testing proves the protection Atkore Defender™ can offer:

**Atkore
Defender™**

**Hot-Dip
Galvanised**

* Based on average ASTM B117 salt spray test results.
